CHONBUK NATIONAL
UNIVERSITY

Opening Address

Hyun-Gi Kim

(-Koica Project Director for Educating Professional ST & Audiologists in the Hue University of Medicine and Pharmacy, Hue, Vietnam.

-Director of Research Institute of Speech Science.)

It is my great pleasure to welcome you to the International Conference on Communication Disorders in the Asian Multicultural Society.

I would like to show my appreciation to the IALP president, Li-Rong Lilly Cheng , Professor Yamamoto, President Cho Hee Rhee Kunyong, the Honour Award Korean professors of HUMP, and the conference organization committee members.

The goal of this conference is to focus on speech therapy and aural rehabilitation education for Vietnamese speech-language and hearing impairment individuals.

We will have an opportunity to understand the cases of multicultural communication disorders in Korean multicultural society.

We will have again the opportunity to listen the history of Vietnamese speech therapy, particularly from the Hue University of Medicine and Pharmacy hospital which has had many experiences in regard to Cleft Palate Surgical operation and first hand management with Japanese Surgeons and Korean Surgeons.

I'd like to share a warm welcome to the Vietnamese professors and Student Speech Therapists that have come all the way from Vietnam, Hue for this conference.

Welcoming Address

Seung-Geun Ahn
(Dean, School of Dentistry, Chonbuk National University)

Good morning everyone.

I am Professor AHN Seung-Geun, the dean of the School of Dentistry, Chonbuk National University.

First of all, I would like to express my sincere congratulations on the opening of the international conference on communication disorders in the Asian multicultural society in our school today. The name of this building is YangYiJae. It means that this is the house where we train the dentists who can solve the discomfort and defects in the oromaxillofacial area. I personally think that the opening of such an international meeting with the motto of "challenge! Multiculturalism! Communication!" in this place today meets the purpose of our faculty establishment.

In 2008, our school had a sister relationship with Hue University in Vietnam. Now, the office of KOICA project team for educating professional speech therapist & audiologist in the HUMP, Hue, Vietnam is at our school. Thanks to the efforts and passion of many people, we have such a big event today and I especially would like to pay homage to the efforts of Professor Shin Hyo-Keun who retired a few years ago.

I hope to further develop mutual understanding and cooperation between Korea and Vietnam through such an events, and solve the communication problems of the increasing multicultural households in our Korean society. Once again, I'd like to express my sincere gratitude for the all guests from Korea and abroad who participated in today and especially for Professor Li-Rong Lily Cheng, the

president of international association of logopedics and phoniatics and Professor Nguyen Vu Quoc Huy, vice president of Hue university of medicine and pharmacy.

Once again, I am pleased to have such a meaningful event in our school today, and wish you all the best for your health and good luck in the future.

Thank you.

Kun-Yong Rhee

(President of International society for the Development and Rehabilitation)

Good morning everyone. I am Kun Yong Rhee, vice-president of Daegu University and chairman, International Society of Development Rehabilitation. I am pleased to co-host the 2017 International Conference on Communication Disorders in the Asian Multicultural Society and Korean Society of Development Rehabilitation.

The Korean Society of Development Rehabilitation was established to promote professional research on rehabilitation and to contribute to the development of rehabilitation for developmental disabilities, such as reviewing the quality of field experts.

The Korean Society of Development Rehabilitation is a significant in this year. Because this is the first international conference to cooperate with several professors this year to establish and participate in the conference.

I am working at Daegu University, which is one of the largest university in Korea with about 20,000 students. But the start of the school started with a special school for the blind. Pastor Young Sik Rhee, my grandfather, founded the first special school in Korea that no one could think of at the time. Today, Daegyeong-dong Campus of Daegu University has 6 special education schools by disability area that are not found in the world, so we provide high quality education and services to students with disabilities.

I would like to be a stepping stone to make a splendid and co-prosperous development in the academic field that the two conferences are aiming at in the future, as the Bible says, "Your beginnings will seem humble, so prosperous will be your future be."

Again, in commemoration of the 2017 International Conference on Communication Disorder in the Asian Multicultural Society, I would like to express my sincere gratitude to the Jeon-buk University Vietnamese

Language Therapy / Audiology Specialist Human Resource Development and Capacity Building Team and the International Society for Multicultural Communication. I hope you have a full of happy time. Thank you.

Hee-Cheon Cho
(President, Jeonju Kijeon College)

I would like to express my sincere appreciation for your visit to Jeonju, South Korea to attend the International Conference on Communication Disorders in Asian Multicultural Society

In addition, I'd also like to express my gratitude and congratulations on the efforts of the Research Institute of Speech Science, Hue University of Medicine and Pharmacy, International Society for Multicultural Communication, International Society for the Development and Rehabilitation and Project Team for Educating Professional Speech Therapist & Audiologist of HUMP and the people involved in the international conference that have been held in Jeonju.

According to the National Statistical Office, the number of multicultural households in Korea is now 1 million, and there are 39,127 multicultural families in 11,239 households in Jeollabuk province, and 70% of them are born in South Korea. Multicultural families with different nationalities may unintentionally cause discomfort or hurt each other due to communication difficulties between parents family, friends and neighbors.

More important than communication difficulties, I think it is a mindset to understand. Jesus declared and taught His love by forgiving and understanding us completely. We also believe that communication disorders among people will be overcome if we try to clear the record of unpleasantness and hurt in our minds due to communication disorders and try to see the other's heart, just as he loved and understood us. Communication in a multicultural society is about starting with the warming and understanding of the other person.

Through various discussions held at this international conference, I hope that a communicational society in the age of multiculturalism will be healed, and a happy society will be created by believing and comforting each other.

Wha-Soo Kim
(President of International Society for Multicultural
Communication)

Mother Nature always wears the color of spirit. So the same scene which yesterday breathed perfume and glittered is overspread melancholy today. Yes! It is certain that the power to produce the delight resides in harmony of nature and "I".

Today, My soul is full of pleasure, interacting with beautiful people who study Speech Language Therapy, Speech Science, Development and Rehabilitation, and Multicultural Communication, in this beautiful campus of Cheonbuk University.

Especially I'd like to express gratitude that we, International Society for Multicultural Communication could participate in the International Conference, as the mainstay of it. Our society was founded in 2008, and since, it has played important roles in multicultural communication studies in Korea. We started from studies to comprehend the nature of multiculturalism, and are now seeking for programs to support actual multicultural children and parents with language-communication, publishing periodical journals. From this year, we are also supporting treatment and education of multicultural children with disabilities, developmental disabilities through collaborative research projects with private language communication laboratories or ones affiliated with universities.

Celebrating "2017 International Conference on Communication Disorders in the Asian Multicultural Society", hold with the motto, "Challenge! Multicultural! Communication!", I'd like to give special thanks to KOICA project team for Educating Professional Speech Therapist & Audiologist in the HUMP, and to the professors of Hue University of Medicine and Pharmacy. Thank you for researchers as well, who presented academic researches. I hope every communication in the conference today to be a present of time that give us peace and happiness.
